Reflection on Limitations

The model performs well in tasks involving:

- **Conversational language**

- **Creative writing** (e.g., haikus, stories)

- **Simplified explanations** for general concepts

It struggles with:

- **Logical reasoning** or step-by-step problem solving

- **Factual accuracy**, especially on niche or recent topics

- **Consistency** in longer or complex outputs

Opportunities for Improvement:

- **Add post-processing filters** to clean up vague or generic responses

- **Incorporate fact-checking** or citations for factual prompts

- **Support dynamic model selection**, letting users choose more capable models (e.g., GPT-4, Claude) for specific tasks
